Quantum Yield vs Dye-to-protein Ratio of **K7-545 — BSA conjugates**

Changes in Fluorescence Polarization of **K7-545-labeled BSA** (MW ~ 65 kDa) upon titration with anti-BSA. The labeled BSA species has still a relatively low polarization of 165 mP and only upon addition of antibody the polarization increases gradually to its final value of 335 mP, which demonstrates the usefulness of this label for the measurement of high-molecular-weight antigens in a Fluorescence Polarization Immunoassay (FPA).
